6 **SEC. 2. FINDINGS.**

7 Congress makes the following findings:

8 (1) Deciphering the sequence of the human ge-
9 nome and other advances in genetics open major
10 new opportunities for medical progress. New knowl-
11 edge about the genetic basis of illness will allow for

1 earlier detection of illnesses, often before symptoms
2 have begun. Genetic testing can allow individuals to
3 take steps to reduce the likelihood that they will con-
4 tract a particular disorder. New knowledge about ge-
5 netics may allow for the development of better thera-
6 pies that are more effective against disease or have
7 fewer side effects than current treatments. These
8 advances give rise to the potential misuse of genetic
9 information to discriminate in health insurance and
10 employment.

11 (2) The early science of genetics became the
12 basis of State laws that provided for the sterilization
13 of persons having presumed genetic “defects” such
14 as mental retardation, mental disease, epilepsy,
15 blindness, and hearing loss, among other conditions.
16 The first sterilization law was enacted in the State
17 of Indiana in 1907. By 1981, a majority of States
18 adopted sterilization laws to “correct” apparent ge-
19 netic traits or tendencies. Many of these State laws
20 have since been repealed, and many have been modi-
21 fied to include essential constitutional requirements
22 of due process and equal protection. However, the
23 current explosion in the science of genetics, and the
24 history of sterilization laws by the States based on

1 early genetic science, compels Congressional action
2 in this area.

3 (3) Although genes are facially neutral markers,
4 many genetic conditions and disorders are associated
5 with particular racial and ethnic groups and gender.
6 Because some genetic traits are most prevalent in
7 particular groups, members of a particular group
8 may be stigmatized or discriminated against as a re-
9 sult of that genetic information. This form of dis-
10 crimination was evident in the 1970s, which saw the
11 advent of programs to screen and identify carriers of
12 sickle cell anemia, a disease which afflicts African-
13 Americans. Once again, State legislatures began to
14 enact discriminatory laws in the area, and in the
15 early 1970s began mandating genetic screening of
16 all African Americans for sickle cell anemia, leading
17 to discrimination and unnecessary fear. To alleviate
18 some of this stigma, Congress in 1972 passed the
19 National Sickle Cell Anemia Control Act, which
20 withholds Federal funding from States unless sickle
21 cell testing is voluntary.

22 (4) Congress has been informed of examples of
23 genetic discrimination in the workplace. These in-
24 clude the use of pre-employment genetic screening at
25 Lawrence Berkeley Laboratory, which led to a court

1 decision in favor of the employees in that case Nor-
2 man-Bloodsaw v. Lawrence Berkeley Laboratory
3 (135 F.3d 1260, 1269 (9th Cir. 1998)). Congress
4 clearly has a compelling public interest in relieving
5 the fear of discrimination and in prohibiting its ac-
6 tual practice in employment and health insurance.

7 (5) Federal law addressing genetic discrimina-
8 tion in health insurance and employment is incom-
9 plete in both the scope and depth of its protections.
10 Moreover, while many States have enacted some type
11 of genetic non-discrimination law, these laws vary
12 widely with respect to their approach, application,
13 and level of protection. Congress has collected sub-
14 stantial evidence that the American public and the
15 medical community find the existing patchwork of
16 State and Federal laws to be confusing and inad-
17 equate to protect them from discrimination. There-
18 fore Federal legislation establishing a national and
19 uniform basic standard is necessary to fully protect
20 the public from discrimination and allay their con-
21 cerns about the potential for discrimination, thereby
22 allowing individuals to take advantage of genetic
23 testing, technologies, research, and new therapies.
